

Instructions for installation

1. To install the driver of the Kazakh language in Latin letters, you need to run the Setup shortcut in a designated folder. Installation is performed automatically after launch.

For reference: driver installation is performed on the Windows operating system

2. Each option of the keyboard layout is installed separately. Installation of each driver is similar.

3. To switch layout options, you must perform the following steps (*if you install several options (Qazaq (version 1.2.3))*):

- Choose Kazakh language;
- Press the button "Қаз/КК" located on the language panel;
- Press the language change button and select the Kazakh keyboard layout you are interested in, as shown in the figure.
